Industrial coating
Anti-corrosion 2K epoxy coating, water-based, gray
e. g. for silo coating, direct-to-metal (DTM)

Basis Epoxy resin (solid epoxy resin and amine)

Recommendation According to expected environmental conditions:

C2 Low corrosivity – Nonheated buildings with low humidity, rural areas with low air pollution and low humidity

C3 Medium corrosivity – Buildings with moderate humidity such as breweries, dairies or laundries, urban / industrial areas with moderate air pollution, coastal areas with low salt exposure

C5 Very high corrosivity – Areas with high humidity, air pollution or chemical exposure like power plants, paper mills or industrial areas, coastal areas with high salt exposure

Preparation	- mix raw materials from part 1 for 10 min with 4 m/s
Component A	- stir in raw materials from part 2 and grind for 30 min at 20 m/s until a fineness of grind of 20 µm
	- add ingredients of part 3 and mix for 10 min with 6 m/s
Component B	- mix raw materials for 5 min with 5 m/s then let it rest overnight

Application	- add Component B to Component A and mix for 5 min at 2.5 m/s
	- dilution with 13 % demineralized water to achieve airless-spraying viscosity
	- dry film thickness as indicated, 40 - 115 µm
